Spline model:
$$\psi_{c,m,t,s} = \sum_{k=1}^{K} \beta_{c,m,s,k} \, B_{c,k}(t)$$

At knot k,
$$\beta_{c,m,s,k} = \begin{cases} \alpha_{c,m,s} & k = k^*, \\ \beta_{c,m,s,k+1} - \delta_{c,m,s,k} & k < k^*, \\ \beta_{c,m,s,k-1} + \delta_{c,m,s,k-1} & k > k^*. \end{cases}$$

Proportions:
$$\phi_{c,t,m,1} = logit^{-1}(\psi_{c,t,m,1})$$
$$\phi_{c,t,m,2} = (1 - \phi_{c,t,m,1})logit^{-1}(\psi_{c,t,m,2})$$
$$\phi_{c,t,m,3} = 1 - (\phi_{c,t,m,1} + \phi_{c,t,m,2})$$

Multi-country national estimation

Single-country national estimation

**Multi-country national estimates inform
single-country national estimates**

$$\boldsymbol{\delta}_{c,1:M,s,k} | \Sigma_{\delta,s} \sim MVN(\mathbf{0}, \Sigma_{\delta,s})$$

$$\Sigma_{\delta,s} = \hat{\Sigma}_{\delta,s}^{global}$$

$$\delta_{c,1:M,s,k} | \Sigma_{\delta,s} \sim MVN\left(0, \hat{\Sigma}_{\delta,s}^{global}\right)$$

The variance-covariance matrix of multi-
country national model informs the Wishart
prior of single-country national model.

$$\alpha_{c,m,s}^{coun.} | \alpha_{r[c],m,s}^{subcont.}, \sigma_{\alpha_s^{coun.}}^2 \sim N(\alpha_{r[c],m,s}^{subcont.}, \sigma_{\alpha_s^{coun.}}^2)$$

$$\alpha_{r,m,s}^{subcont.} | \alpha_{m,s}^{world}, \sigma_{\alpha_s^{subcont.}}^2 \sim N\left(\alpha_{m,s}^{world}, \sigma_{\alpha_s^{subcont.}}^2\right),$$

$$\alpha_{m,s}^{world} \sim N(0, 10^2)$$

$$\alpha_{r[c],m,s}^{subcont.} = \hat{\alpha}_{r[c],m,s}^{subcont.}$$
$$\sigma_{\alpha_s^{coun.}}^2 = \hat{\sigma}_{\alpha_s^{coun.}}^2$$

$$\alpha_{c,m,s}^{coun.} | \hat{\alpha}_{r[c],m,s}^{subcont.}, \hat{\sigma}_{\alpha_{c,s}}^2 \sim N(\hat{\alpha}_{r[c],m,s}^{subcont.}, \hat{\sigma}_{\alpha_s^{coun.}}^2)$$

Hierarchically estimated intercept of multi-
country national model informs the prior of
intercept in single-country national model.
