

Initialize $\hat{f}_j^0(\cdot) = 0 \forall j, m = 0$

Iterate $m \leftarrow m + 1$

for $j \leftarrow 1, p$ **do**

 Compute partial residuals $R_{ij} = Z_i - \hat{\alpha} - \sum_{k \neq j} \hat{f}_k^{m-1}(X_{ik})$

 For each smooth term, fit a Neural Network with R_{ij} and X_{ij} to obtain $\hat{f}_j^m$

 Replace $\hat{f}_j^m$ with its centered version $\hat{f}_j^m(\cdot) - \frac{\sum_{i=1}^n \hat{f}_j^m(X_{ij})}{n}$

Until

$$\frac{\sum_{j=1}^p \sum_{i=1}^n (\hat{f}_j^m(X_{ij}) - \hat{f}_j^{m-1}(X_{ij}))^2}{\sum_{j=1}^p \sum_{i=1}^n (\hat{f}_j^{m-1}(X_{ij}))^2} < \epsilon$$
